

GRADE 7 SCIENCE — DAY 2

STRAND B: LIFE SYSTEMS

Topic: Biotic and Abiotic Factors

Today's Learning Goal

I can:

- identify **biotic** and **abiotic** factors
 - explain the difference between them
 - explain how they interact in an ecosystem
-

PART A — LET'S LEARN

Biotic Factors

Biotic factors are the **living parts** of an ecosystem.

Examples: **plants, animals, insects, fungi, bacteria**

Abiotic Factors

Abiotic factors are the **non-living parts** of an ecosystem.

Examples: **sunlight, water, air, soil, rocks, temperature, wind**

Remember

BIO = LIFE → Biotic = Living

Abiotic = Non-living

PART B — IDENTIFY

Write **B** for biotic and **A** for abiotic.

1. Tree _____
2. Sunlight _____
3. Fish _____
4. Water _____

5. Soil _____
 6. Butterfly _____
 7. Rock _____
 8. Temperature _____
 9. Mushroom _____
 10. Air _____
-

PART C — POND ECOSYSTEM

A pond contains **fish, frogs, algae, insects, water, sunlight, mud, rocks, and oxygen.**

11. List three biotic factors:

a) _____ b) _____ c) _____

12. List three abiotic factors:

a) _____ b) _____ c) _____

PART D — THINK ABOUT IT

13. What might happen to a plant if it does not receive enough sunlight?

14. What might happen to fish if pond water becomes too warm?

15. How can trees affect their surrounding environment?

PART E — CHALLENGE

A forest experiences a long period without rain.

16. Which abiotic factor has changed?

17. Name two biotic factors that could be affected.

a) _____ b) _____

18. Explain how the lack of rain could affect one organism.

PART F — EXIT TICKET

19. What is a biotic factor? _____

20. What is an abiotic factor? _____

21. Give one example of each.

Biotic: _____ Abiotic: _____

KEY IDEA

Biotic = living. Abiotic = non-living. Both interact and affect the ecosystem.
